PRESS-RELEASE

The largest treatment unit for COVID-19 patients was opened in Kommunarka

In October 2020, Roder LLC built a backup intensive care unit for COVID-19 patients in Kommunarka. The Mayor of Moscow Sergey Sobyenin visited the facility on October 26.

The complex deployed in Kommunarka was the last to receive patients, four more backup hospitals were opened before that. Despite the fact that this is a reserve facility, it is technologically equipped with the latest technology, and the level of comfort is comparable to capital facilities. The hospital is connected to the networks of housing and communal services and is provided with all necessary medical equipment.

RODER LLC installed 22 temporary constructions in Kommunarka. Twenty hospital buildings, each measuring 20m x 60m, one 20m x 40m laboratory and one 20m x 70m administrative building were built by RÖDER LLC on the territory of the largest coronavirus hospital in Moscow. They are used to accommodate patients with coronavirus infection of varying degrees of severity who need care. With an area of 25,400 m² and a capacity of 919 wards and 330 intensive care beds, the existing capacity of the Municipal Hospital has more than doubled. Patients are accommodated in comfortable rooms with shower and bath, all bunks are equipped with oxygen supply systems and personnel call buttons. Separate entrances to the airlock system and an air filtration system ensure safety. Staff rooms are also integrated: changing rooms, rest areas, a room for clothing and showers. The RÖDER halls are equipped with an ISO facade and a thermal tarpaulin roof. RÖDER LLC also established such temporary medical facilities in another 16 city medical centres in Moscow.

"In general, from the point of view of technology, this is one of the most complex complexes, not inferior in complexity to what we did in Voronovskaya hospital, but even better in capacity. I think that the creation of such a powerful group of hospitals gives us a margin of safety and guarantee that in the near future we will not certainly touch the planned help and will feel confident," said Mayor Sergei Sobyenin.

According to Denis Protsenko, the chief physician of the Municipal Clinical Hospital № 40 in Kommunarka, the beds that have appeared at the disposal of doctors, thanks to the construction of the reserve hospital, allow both diagnosing patients and fully treating them.

Roder LLC is a Russian subsidiary of the RÖDER Group, which was founded in 1959 in Germany. Since 2006 we have been actively working in Russia and are one of the market leaders in the field of frame and tent constructions production and temporary infrastructure organization. Our efficient and modern construction technologies allowed us to successfully implement more than 2000 projects of different levels of complexity and directions during 14 years of work in Russia.
